DS-K7M151-P
Clamshell Proximity Card

Hikvision proximity cards set the electronic security benchmark for 125 kHz proximity readers, cards, and tags. Based upon proven contactless digital radio frequency identification (RFID) technology, proximity readers interface with a wide range of electronic access control systems by complying with the Wiegand communication protocol.

Additionally, proximity cards and tags are passive devices and eliminate the need for maintenance by requiring no batteries, and can be ordered to support several proximity reader technologies.
